

Product Key Facts

CSOP Hang Seng China Enterprises Index Daily (2x) Leveraged Product

CSOP Asset Management Limited

28 April 2022

This is a leveraged product. It is different from conventional exchange traded funds as it seeks leveraged investment results relative to the Index and only on a Daily basis.

This product is not intended for holding longer than one day as the performance of this product over a longer period may deviate from and be uncorrelated to the leveraged performance of the Index over the period.

This product is designed to be used for short term trading or hedging purposes, and is not intended for long term investment.

This product only targets sophisticated trading-oriented investors who understand the potential consequences of seeking Daily leveraged results and the associated risks and constantly monitor the performance of their holdings on a Daily basis.

This is a product traded on the exchange.

This statement provides you with key information about this product.

This statement is a part of the Prospectus.

You should not invest in this product based on this statement alone.

Quick facts

Stock code: 07288

Trading lot size: 100 Units

Manager: CSOP Asset Management Limited

南方東英資產管理有限公司

Trustee and Registrar: HSBC Institutional Trust Services (Asia) Limited

Ongoing charges over a year# (annual average daily ongoing

1.56% (0.006%)

charges*):

The ongoing charges figure is based on expenses for the year ended 31 December 2021. This figure may vary from year to year.

^{*} The annual average daily ongoing charges figure is equal to the ongoing charges figure divided by the number of dealing days for the year ended 31 December 2021. This figure may vary from year to year.

^{**} This is the actual tracking difference of the last calendar year. Investors should refer to the ETF website for more up to date information on actual tracking difference.

What is this product?

CSOP Hang Seng China Enterprises Index Daily (2x) Leveraged Product (the "**Product**") is a subfund of CSOP Leveraged and Inverse Series, an umbrella unit trust established under Hong Kong law. Units of the Product (the "**Units**") are traded in HKD on The Stock Exchange of Hong Kong Limited (the "**SEHK**") like stocks. It is a futures-based product which invests directly in futures contracts on the Hang Seng China Enterprises Index ("**HSCEI Futures**") listed on the Hong Kong Futures Exchange Limited ("**HKFE**") so as to give the Product twice (2x) the Daily performance of the Index. It is denominated in HKD. Creations and redemptions are in HKD only.

Objective and investment strategy

Objective

The investment objective of the Product is to provide investment results that, before fees and expenses, closely correspond to <u>twice (2x)</u> the <u>Daily</u> performance of the Index. **The Product does not seek to achieve its stated investment objective over a period of time greater than one day.**

"Daily" in relation to the leveraged performance of the Index or the performance of the Product, means the leveraged performance of the Index or the performance of the Product (as the case may be) from the close of market of a given Business Day until the close of the market on the subsequent Business Day.

Strategy

To achieve the investment objective of the Product, the Manager will adopt a futures-based replication strategy through investing directly in the spot month HSCEI Futures subject to the rolling strategy discussed below, to obtain the required exposure to the Index.

In entering into the spot month HSCEI Futures, the Manager anticipates that no more than 30% of the Net Asset Value of the Product (the "NAV") from time to time will be used as margin to acquire the HSCEI Futures. Under exceptional circumstances (e.g. increased margin requirement by the exchange in extreme market turbulence), the margin requirement may increase substantially.

Not less than 70% of the NAV (this percentage may be reduced proportionately under exceptional circumstances where there is a higher margin requirement, as described above) will be invested in cash (HKD or USD) and other HKD or USD denominated investment products, such as deposits with banks in Hong Kong and HKD or USD denominated short-term investment-grade bonds and money market funds in accordance with the requirements of the Code.

Daily rebalancing

The Product as a leveraged product will rebalance its position on a day when the HKFE and the SEHK open for trading (i.e. a Business Day). On such days the Product will rebalance its position by the end of trading of the underlying futures market, following the movement of the Index, by increasing exposure

in response to the Index's Daily gains or reducing exposure in response to the Index's Daily losses, so that its Daily leverage exposure ratio to the Index is consistent with the Product's investment objective.

Futures roll

The Manager will use its discretion to carry out the roll-over of the spot month HSCEI Futures into next month HSCEI Futures with the goal that, by one Business Day before the last trading day of the spot month HSCEI Futures, all roll-over activities would have occurred.

Index

The Index serves as a benchmark that reflects the performance of the largest and most liquid mainland securities listed on the Main Board of the HKEX. A mainland security is defined as a Hong Kong-listed security that has at least 50% of its sales revenue (or profit or assets, if relevant) derived from the mainland. It is denominated in HKD. The Index was launched on 8 August 1994 and had a base level of 2000 on 3 January 2000. The Manager (and each of its Connected Persons) is independent of Hang Seng Indexes Company Limited, the Index Provider.

The Index is a price return, freefloat-adjusted market capitalisation weighted index with an 8% cap on individual constituent weightings. As at 22 March 2022, it comprised of 50 securities with total market capitalisation of HKD 16,789.09 billion.

The constituents of the Index and their respective weightings are published at https://www.hsi.com.hk/eng/indexes/all-indexes/hscei (this has not been reviewed or approved by the SFC). You can also obtain additional information of the Index including the index methodology and the closing level of the Index from the above website.

Bloomberg Code: HSCEI Reuters Code: .HSCEI

Use of derivatives / investment in derivatives

The Product's net derivative exposure may be more than 100% of the Product's Net Asset Value.

What are the key risks?

Investment involves risks. Please refer to the Prospectus for details including as to the risk factors.

1. Investment risk

 The Product is a derivative product and is not suitable for all investors. There is no guarantee of the repayment of principal. Therefore your investment in the Product may suffer substantial or total losses.

2. Long term holding risks

- The Product is not intended for holding longer than one day as the performance of the Product over a period longer than one day will very likely differ in amount and possibly direction from the leveraged performance of the Index over that same period (e.g. the loss may be more than twice the fall in the Index).
- The effect of compounding becomes more pronounced on the Product's performance as the Index experiences volatility. With higher Index volatility, the deviation of the Product's performance from the leveraged performance of the Index will increase, and the performance of the Product will generally be adversely affected.
- As a result of Daily rebalancing, the Index's volatility and the effects of compounding of each day's return over time, it is even possible that the Product will lose money over time while the Index's performance increases or is flat.

3. Leverage risk

• The Product will utilise leverage to achieve a Daily return equivalent to twice (2x) the return of the Index. Both gains and losses will be magnified. The risk of loss resulting from an investment in the Product in certain circumstances including a bear market will be substantially more than a fund that does not employ leverage.

4. Risk of rebalancing activities

 There is no assurance that the Product can rebalance its portfolio on a Daily basis to achieve its investment objective. Market disruption, regulatory restrictions or extreme market volatility may adversely affect the Product's ability to rebalance its portfolio.

5. Liquidity risk

• The rebalancing activities of the Product typically take place near the end of trading of the underlying futures market to minimise tracking difference. As a result, the Product may be more exposed to the market conditions during a shorter interval and may be more subject to liquidity risk.

6. Intraday investment risk

• The Product is normally rebalanced at the end of trading of the underlying futures market on a Business Day. As such, return for investors that invest for period less than a full trading day will generally be greater than or less than two times (2x) leveraged investment exposure to the Index, depending upon the movement of the Index from the end of one trading day until the time of purchase.

7. Portfolio turnover risk

• Daily rebalancing of Product's holdings causes a higher level of portfolio transactions than compared to the conventional exchange traded funds. High levels of transactions increase brokerage and other transaction costs.

8. Futures contracts risks

- Investment in futures contracts involves specific risks such as high volatility, leverage, rollover and margin risks. There may be imperfect correlation between the value of the underlying reference assets and the futures contracts, which may prevent the Product from achieving its investment objective.
- A "roll" occurs when an existing HSCEI Future is about to expire and is replaced with another HSCEI
 Future with a later expiration date. The value of the Product's portfolio (and so the NAV per Unit)
 may be adversely affected by the cost of rolling positions forward as the HSCEI Futures approach
 expiry.
- An extremely high degree of leverage is typical of a futures trading account. As a result, a relatively small price movement in a HSCEI Future may result in a proportionally high impact and substantial losses to the Product, having a material adverse effect on the NAV. A futures transaction may result in significant losses in excess of the amount invested.

9. Holding of HSCEI Futures restriction in number risk

• The positions of futures contracts or stock options contracts held or controlled by the Manager, including positions held for the Manager's own account or for the funds under its management (such as the Product) but controlled by the Manager, may not in aggregate exceed the relevant maximum under the Securities and Futures (Contracts Limits and Reportable Position) Rules (the "Rules"). Accordingly, if the position held or controlled by the Manager reaches the relevant position limit or if the Net Asset Value of the Product grows significantly, the restrictions under the Rules may prevent creations of Units due to the inability under the Rules of the Product to acquire further HSCEI Futures. This may cause a divergence between the trading price of a Unit on the SEHK and the Net Asset Value per Unit. The investment exposure could also deviate from the target exposure which adds tracking error to the Product.

10. Concentration and Mainland China market risk

- The Product is subject to concentration risks as a result of tracking the leveraged performance of a single geographical region or country (the PRC including Hong Kong). The value of the Product may be more volatile than that of a fund having a more diverse portfolio of investments.
- The Index constituents are companies listed on the SEHK and primarily traded in Hong Kong, and have substantial business exposure to the PRC mainland, an emerging market. Investments of the Product may involve increased risks and special considerations not typically associated with investment in more developed markets, such as liquidity risks, currency risks/control, political and economic uncertainties, legal and taxation risks, settlement risks, custody risk and the likelihood of a high degree of volatility.

11. Distributions risk

Payment of distributions out of capital or effectively out of capital amounts to a return or withdrawal
of part of an investor's original investment or from any capital gains attributable to that original
investment and may result in an immediate reduction in the NAV per Unit.

12. Passive investments risk

• The Product is not "actively managed" and the Manager will not adopt any temporary defensive position when the Index moves in an unfavourable direction. In such circumstances, Units of the Product will also decrease in value.

13. Trading risks

- The trading price of the Units on the SEHK is driven by market factors such as the demand and supply of the Units. Units may trade at a substantial premium or discount to the NAV.
- As investors will pay certain charges (e.g. trading fees and brokerage fees) to buy or sell Units on the SEHK, investors may pay more than the NAV per Unit when buying Units on the SEHK, and may receive less than the NAV per Unit when selling Units on the SEHK.

14. Trading differences risk

- The HKFE and the SEHK have different trading hours. As the HKFE may be open when Units in the Product are not priced, the value of the HSCEI Futures in the Product's portfolio may change at times when investors will not be able to purchase or sell the Product's Units. Difference in trading hours between the HKFE and the SEHK may increase the level of premium/discount of the Unit price to its Net Asset Value.
- Trading of the Index constituents closes earlier than trading of the HSCEI Futures so there may
 continue to be price movements for the HSCEI Futures when Index constituents are not trading.
 There may be imperfect correlation between the value of the Index constituents and the HSCEI
 Futures, which may prevent the Product from achieving its investment objective

15. Reliance on market maker risk

Although the Manager will use its best endeavours to put in place arrangements so that at least one
market maker will maintain a market for the Units and gives not less than three months' notice prior
to termination of the market making arrangement, liquidity in the market for the Units may be
adversely affected if there is only one market maker for the Units. There is also no guarantee that
any market making activity will be effective.

16. Tracking error and correlation risks

• The Product may be subject to tracking error risk, which is the risk that its performance may not track that of the Daily leveraged performance of the Index exactly. This tracking error may result from the investment strategy used, high portfolio turnover, liquidity of the market and fees and expenses and the correlation between the performance of the Product and the two times (2x) Daily performance of the Index may be reduced. The Manager will monitor and seek to manage such risk in minimising tracking error. There can be no assurance of exact or identical replication of the leveraged performance of the Index at any time.

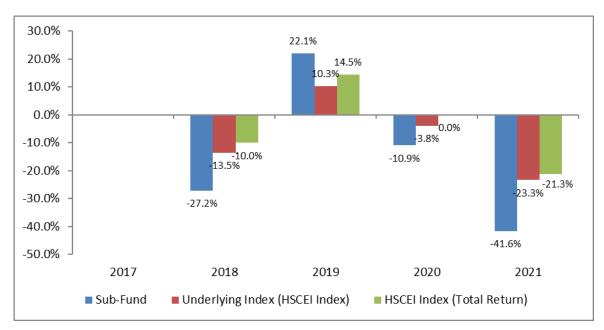

17. Volatility risk

• Prices of the Product may be more volatile than conventional ETFs because of the use of leverage and the daily rebalancing activities.

18. Termination risk

• The Product may be terminated early under certain circumstances, for example, where there is no market maker, the Index is no longer available for benchmarking or if the size of the Product falls below USD20 million. Investors may not be able to recover their investments and suffer a loss when the Product is terminated.

How has the Product performed?

- Past performance information is not indicative of future performance. Investors may not get back the full amount invested.
- The computation basis of the performance is based on the calendar year end, NAV-To-NAV, with dividend reinvested.
- These figures show by how much the Product increased or decreased in value during the calendar year being shown. Performance data has been calculated in HKD taking into account ongoing charges and excluding your trading costs on SEHK.
- Where no past performance is shown there was insufficient data available in that year to provide performance.

Fund launch date: 14 March 2017.

Is there any guarantee?

The Product does not have any guarantees. You may not get back the full amount of money you invest.

What are the fees and charges?

Charges incurred when trading the Product on the SEHK

Fee What you pay
Brokerage fee Market rate

Transaction levy 0.0027%¹ of the trading price

Financial Reporting Council 0.00015%²

("FRC") transaction levy

Trading fee 0.005%³ of the trading price

Stamp duty Ni

¹ Transaction levy of 0.0027% of the trading price of the Units payable by each of the buyer and the seller.

Ongoing fees payable by the Product

The following expenses will be paid out of the Product. They affect you because they reduce the NAV of the Product which may affect the trading price.

Annual rate (as a % of NAV)

Management fee* 0.99%

Trustee fee Included in the management fee

Performance fee Nil

Administration fee Included in the management fee

* Please note that the management fee may be increased up to a permitted maximum amount by providing one month's prior notice to Unitholders. Please refer to the section headed "Fees and Expenses" in the Prospectus for further details of the fees and charges payable and the permitted maximum of such fee allowed, as well as other ongoing expenses that may be borne by the Product.

Other fees

You may have to pay other fees when dealing in the Units of the Product. Please refer to the Prospectus for details.

Additional information

The Manager will publish important news and information with respect to the Product (including in respect of the Index),in the English and Chinese languages (unless otherwise specified), on the Manager's website at http://www.csopasset.com/L HSCEI (which has not been reviewed or approved by the SFC) including:

- (a) the Prospectus and this statement (as revised from time to time);
- (b) the latest annual accounts and half-yearly unaudited report (in English only);
- (c) any notices relating to material changes to the Product which may have an impact on Unitholders such as material alterations or additions to the Prospectus or the Product's constitutive documents:
- (d) any public announcements made by the Product, including information with regard to the Product and Index, notices of the suspension of the calculation of the NAV, suspension of creation and redemption of Units, changes in fees, and the suspension and resumption of trading;
- (e) the near real time indicative NAV per Unit updated every 15 seconds during SEHK trading hours in HKD:
- (f) the last NAV of the Product and the last NAV per Unit of the Product in HKD;
- (g) the past performance information of the Product;

² FRC transaction levy of 0.00015% of the trading price of the Units, payable by each of the buyer and the seller from 1 January 2022.

³ Trading fee of 0.005% of the trading price of the Units, payable by each of the buyer and the seller.

- (h) the daily tracking difference, the average daily tracking difference and the tracking error of the Product;
- (i) full portfolio information of the Product (updated on a Daily basis);
- (j) a "performance simulator" which allows investors to select a historical time period and simulate the performance of the Product vis-à-vis the Index during that period based on historical data;
- (k) the latest list of the participating dealers and market makers; and
- (I) compositions of dividends (i.e. the relative amounts paid out of (i) net distributable income and (ii) capital), if any, for a rolling 12-month period.
